4. Our Services

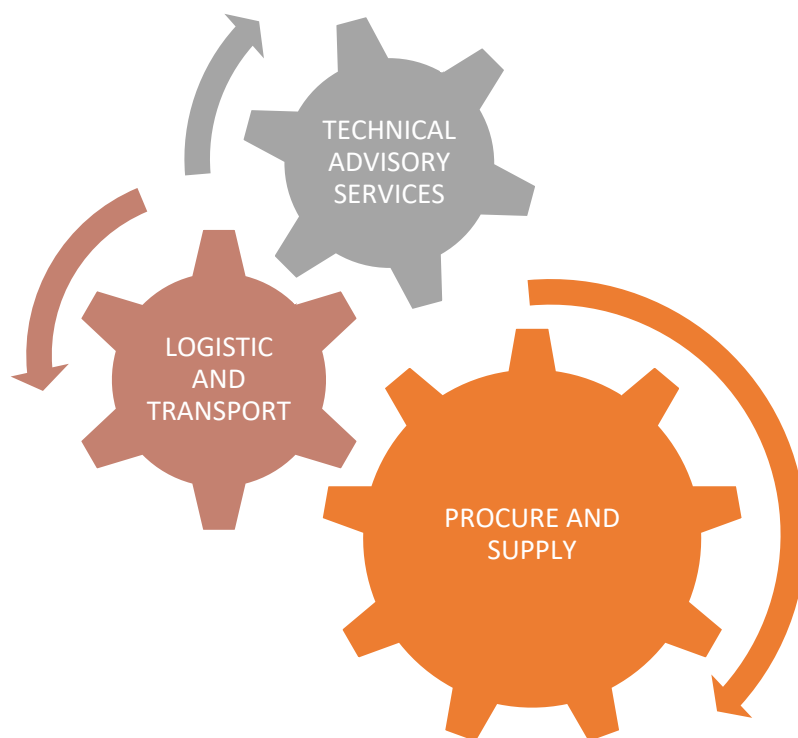

In order to explosives stringent conditions and documents must be fulfilled in order to be able to move this type of high-risk cargo, thus very few companies make the effort to obtain the certifications necessary to operate in this area.

At EXPLO-Afrique, we stop at nothing to offer maximum flexibility service to our customers. Drivers assigned to transport explosives must hold a HAZCHEM certification.

Our trucks and trailers are also inspected by the CIE and must comply with the most stringent requirements.

4.1 PROCURE AND SUPPLY

Based of our industry knowledge , experience and our better understanding of the industry, we position to negotiate better pricing with various manufactures in the explosives market . This benefit thereof is subsequently passed on to our customers

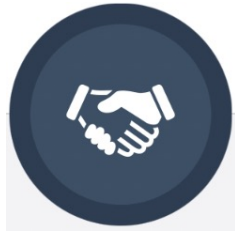

4.2. LOGISTICS AND TRANSPORT

As we run our own fleet of truck, trailer and in a process of acquiring of our mobile tankers , this put us in the better position, as we control one of the main input cost in the in the supply value chain. This enable us to be competitive and give us flexibility in when engaging in any negotiating with our customers

4.3. TECHNICAL SERVICES

Our Technology Partner

EXPLO AFRIQUE

mineexcellence

EXPLO Afrique has an exclusive distributor or reseller agreement with one of the global drill and blast software developer: Mine excellence

Mine Excellence is a leading technology provider in the end to end blasting technology space globally. Our solution helps in designing, optimizing and analysing how blasts are performing. Our SaaS and Mobile based platforms are designed specifically to benefit the mining industry so that business intelligence is provided in the hands of the average blaster, blast supervisor and even the senior mine management.

Innovative technology that makes the use of the latest innovations of GIS, Drone data and optimization algorithms. MineExcellence platform can result in significant benefits operationally and eliminate potential risks/problems during mining operations such as drilling and blasting. The platform is currently used by Tier-1 large mining company's cross mines, small mining companies at individual mines and drilling and blasting contractors around the world.
